INDUSTRIALS SHORTLIST: VINCI, COPART AND PAYCHEX

Prepared by **Tanmay Gambhir** for **Adam Asztalos** and **João Pedro Vieira** | Research date 29 October 2026 | Prices are 28 October 2026 regular-session closes

Decision requested: which of three Industrials names deserves deeper research. Our ranking is **Copart first**, **VINCI second only if the net-margin rule is treated as a preference**, and **Paychex third**. None of the three passes every numerical rule in the JEME investment philosophy, so none is presented as a BUY [J1]. Scenario values are FY2027 EPS × P/E sensitivities built on our own assumptions. They are not validated twelve-month targets, and no DCF has been built yet.

Company	28 Oct close	Base scenario (FY2027 EPS × P/E)	Gap	Status
VINCI (DG)	€108.30	€8.72 reported × 13.5x = €117.72	+8.7%	Priority 2: conditional on a margin-rule waiver
Copart (CPRT)	$28.96	$1.65 reported × 22x = $36.30	+25.3%	Priority 1: advance to deeper research
Paychex (PAYX)	$108.21	$5.95 adjusted × 20x = $119.00	+10.0%	Priority 3: hold, do not advance now

Gap is price return to the base value, excluding dividends, costs and currency. EPS definitions differ (IFRS, GAAP, company-adjusted), so gaps are not like-for-like. Sources: [M5, M7, M8], our calculations.

VINCI

DG | EURONEXT PARIS | INDUSTRIALS: CONTRACTING AND CONCESSIONS | FISCAL YEAR TO 31 DECEMBER

1 RECOMMENDATION AT A GLANCE

PRICE AND DATE	**€108.30**, regular-session close on 28 October 2026 [M5]. That is 12.5x reported 2025 diluted EPS of €8.65, with a €5.00 dividend for 2025 (4.6% yield) [V1].
STATUS	**Priority 2: conditional research candidate, not a BUY.** Advance only if associates treat the 17.5% net-margin rule as a screening preference rather than an exclusion.
STRONGEST REASON FOR	Record **€7.0bn free cash flow** in 2025 and a **€75.4bn order book**, priced at 12.4x our base 2027 EPS [V1, V4].
MAIN REASON AGAINST	**French taxation.** The "exceptional" corporate surtax was extended into 2026 and is proposed again for 2027, while a separate motorway levy could add about €450m. In our base case the two absorb about €1.58 of 2027 EPS [V3, V5, V6].

2 BUSINESS MODEL AND COMPETITIVE POSITION

VINCI runs two economically different businesses. In **contracting** (VINCI Energies, Cobra IS, VINCI Construction), public and private clients pay to have infrastructure and energy systems built, installed and maintained. Margins are thin and depend on bid discipline and on the main costs: staff, subcontractors and materials. In **concessions** (VINCI Autoroutes, VINCI Airports), motorists and airlines pay tolls and airport charges under long-term contracts, so extra traffic carries a high margin, but the rights are finite and regulated. Group Ebit was €9.6bn in 2025, a **12.8% operating margin**, yet net margin was only 6.6% because contracting dominates revenue and net financial debt is **€19.1bn** [V1].

The advantage is **scarce, long-dated concession assets** plus a contracting network large enough to win complex grid and energy work. Concessions turn traffic and tariff indexation into cash with little reinvestment; contracting adds growth but little margin. The weakness follows directly: much of the profit comes from **regulated French concessions** [V2], so the state can reclaim value through tax.

3 TOP-DOWN INVESTMENT CASE

Trend to demand. Electrification, grid reinforcement and industrial energy efficiency raise demand for VINCI Energies and Cobra. **Demand to revenue (evidenced).** Energy Solutions revenue grew 7.4% in the first nine months of 2026, against 0.4% for Construction, and their combined order intake rose 6% to €49.6bn [V4]. **Revenue to profit and cash (evidenced).** 2025 Ebit grew 6.2% and free cash flow reached a record €7.0bn; nine-month 2026 free cash flow was already €6.5bn against a full-year guide of about €6bn [V1, V4]. **Assumption.** Order growth converts into underlying EPS growth of 4.5% a year to 2027. This is our input, not guidance; we have no divisional margin forecast.

Catalyst (external). The French 2027 budget will decide whether the motorway levy (TEITLD) rises and whether the surtax runs a third year. Last year's Finance Law was only adopted on 19 February 2026 [V6]. Each item is worth about **€0.79 per share** of 2027 EPS in our numbers, making the budget the main valuation swing factor.

4 FINANCIAL PERFORMANCE AND MANAGEMENT OUTLOOK

Year	Revenue (€bn)	Growth	Parent net profit (€bn)	Growth	Net margin
2023	68.84	–	4.70	–	6.8%
2024	71.62	+4.0%	4.86	+3.4%	6.8%
2025	74.60	+4.2%	4.90	+0.8%	6.6%

Reported IFRS, parent share. Revenue excludes concession subsidiaries' construction work. Growth from unrounded figures. Sources: [V1, V8].

Fiscal years to 31 December. Revenue excludes concession subsidiaries' construction work. Net profit attributable to owners of the parent. Source: VINCI [V1, V8].

Revenue growth is steady but modest (2025 organic: 2.6%) [V1]. The **€449m exceptional French corporate surtax** held 2025 reported diluted EPS growth to 2.6% (€8.65). **Adjusted (company non-IFRS):** excluding the surtax, net income was €5.35bn and EPS €9.44, up 12% [V1]. We do not treat €9.44 as the run rate: Article 12 of the 2026 Finance Law extended the surtax, VINCI booked €323m of it in H1 2026 (about 75% of its 2026 estimate), and the draft 2027 budget proposes another year [V3, V6].

Guidance (22 October 2026): further growth in 2026 revenue, operating income and net income, and free cash flow of about €6bn, **excluding a possible TEITLD increase** that VINCI estimates at about €450m charged to 2026 earnings and payable in 2027 [V4, V5]. H1 2026 diluted EPS rose 11% to €3.70 [V3]. The levy and the surtax are separate items; their persistence into 2027 is our assumption.

5 VALUATION AND RISKS

Case	FY2027 EPS	Key assumptions (EPS = reported IFRS diluted)	P/E	Value	vs €108.30
Bear	€8.24	Underlying growth +2% a year; surtax and levy both apply	11.0x	€90.64	–16.3%
Base	€8.72	Underlying growth +4.5% a year; surtax and levy both apply	13.5x	€117.72	+8.7%
Bull	€9.82	Underlying growth +6% a year; surtax lapses, levy applies	13.8x	€135.52	+25.1%

Our scenarios, no probabilities: 2025 EPS ex-surtax (€9.44), two years of underlying growth, less €0.79/share per French tax item applying in 2027 (€449m or €450m ÷ 566.8m diluted shares implied by 2025 net profit ÷ EPS). No tax shield on the levy.

Multiple. The range is anchored on published year-end P/Es of about **11.6–13.8x for 2022–2025** [M4]; these are trailing, so 13.5x forward is generous. **Revision:** our previous base (€9.50 × 13.5 = €128.25) assumed the surtax would disappear; the evidence points the other way, so the base falls to €117.72. **Earnings versus rating:** at today's 12.52x on reported 2025 EPS, €8.72 is worth €109.18 (+0.8%), so almost all of the 8.7% base gap is re-rating and the 4.6% dividend yield is the more dependable return. A press summary of Morgan Stanley research puts the levy at 9–12% of operators' 2027 earnings [V7]; our €0.79 is 8% of pre-levy EPS.

Analysts. Stock Analysis consensus (S&P Global data, retrieved 29 October) is Buy, mean target €140.75 from 20 analysts [M1]; VINCI's coverage list includes at least one Sell [V9]. These are consensus data, not full reports. **Thesis-breaking risk:** French fiscal extraction from concessions that stops growth reaching shareholders. **Next evidence:** the final 2027 Finance Law, then FY2026 results (February 2027) for actual tax charges and cash conversion.

6 INVESTMENT PHILOSOPHY FIT

EPS growth ≥10% a year	FAIL 2025 reported +2.6%	Net margin >17.5%	FAIL 6.6% in 2025, structural
ROE >15%	UNVERIFIED not rebuilt from accounts	Debt/equity <1.5	UNVERIFIED net debt €19.1bn; ratio not rebuilt
Rising interest coverage	UNVERIFIED five-year series not built	Positive, growing FCF	AT RISK €7.0bn in 2025; 2026 guide about €6bn
P/E and P/B below industry	NOT ESTABLISHED no defined peer set	Sector preference	NOT PREFERRED Industrials (preference only)

Attractiveness versus eligibility. VINCI is the cheapest of the three with the highest yield, but **fails two hard rules**. The margin failure is structural (no plausible mix change lifts a contracting-led group from 6.6% to 17.5%), so mandatory rules exclude it at any price. Governance and ESG reviews are open.

COPART

CPRT | NASDAQ | INDUSTRIALS: ONLINE VEHICLE AUCTIONS AND REMARKETING | FISCAL YEAR TO 31 JULY

1 RECOMMENDATION AT A GLANCE

PRICE AND DATE	**$28.96**, regular-session close on 28 October 2026 [M7]. That is 18.7x FY2026 diluted EPS of $1.55 [C2]. No dividend.
STATUS	**Priority 1: advance to deeper research, not yet a BUY.** It is the closest of the three to eligibility, but the recovery our valuation needs is not yet evidenced.
STRONGEST REASON FOR	The best economics of the three: a **31.8% net margin** and **no borrowings** at 31 July 2026. The shares trade well below their FY2022–25 year-end P/E range of 28–37x [C1, C2, M6].
MAIN REASON AGAINST	**US insurance volumes are shrinking.** Domestic insurance units fell 7.5% in Q4 FY2026, partly because one insurer left. If share loss persists, the low multiple is deserved [C3].

2 BUSINESS MODEL AND COMPETITIVE POSITION

Insurers, dealers, rental and fleet companies consign vehicles to Copart, which collects, stores and sells them through online auctions to dismantlers, rebuilders, exporters and dealers. Sellers and buyers pay **service fees**. For consigned cars, Copart records the fee, not the vehicle's value. Vehicles Copart buys and resells itself are a smaller, lower-margin share. Revenue depends on **unit volumes, fee levels and auction prices**, because higher prices raise price-linked fees and the insurer's recovery. The main costs are **yard operations**: land, towing, labour and storage. These are largely fixed in the short run, so lower volumes compress margins. In Q4 FY2026, gross profit fell 5.5% while revenue rose 2.4% [C2].

The competitive advantage is a **two-sided network**: a large yard footprint that is hard to replicate because of zoning and permitting, and a global buyer base that raises auction prices and therefore the seller's recovery. Its closest US salvage rival is IAA, owned by RB Global. The advantage protects price and margin, but it **does not lock in insurer contracts**, as the lost customer shows.

3 TOP-DOWN INVESTMENT CASE

Trend to demand. Repair costs for modern, sensor-heavy cars have risen relative to vehicle values, pushing more damaged cars past the total-loss threshold. Management cited a record total-loss frequency of 23.3% in Q4, even though collision claim frequency fell 3.4% [C3]. **Demand to revenue (evidenced).** This did not become US unit growth, because insurer share moved: domestic insurance units fell 7.5%. Management says domestic assignments would have risen 2.3% excluding one lost customer, but assignments are a different metric from units sold. International insurance units rose 11.2% [C3]. **Revenue to profit (evidenced).** With largely fixed yard costs, FY2026 revenue grew 0.4% while net profit fell 4.4% [C2].

Catalyst (internal): ACV. Copart announced the acquisition alongside its Q4 results on 10 September 2026, at $10.50 per share in cash (about **$1.9bn equity value**), and completed it on 16 October [C4, C5]. ACV adds a dealer-to-dealer wholesale auction platform outside insurance salvage. Management expects the deal to be **neutral to EPS in FY2027**, its first full year, and accretive from FY2028, funded from cash [C4]. **Evidenced:** the terms and completion. **Assumption:** that the core business stops losing insurance share. Neither management nor our evidence establishes this yet.

4 FINANCIAL PERFORMANCE AND MANAGEMENT OUTLOOK

Fiscal year	Revenue ($bn)	Growth	Net income ($bn)	Growth	Net margin	Diluted EPS
FY2024	4.24	–	1.36	–	32.2%	$1.40
FY2025	4.65	+9.7%	1.55	+13.8%	33.4%	$1.59
FY2026	4.67	+0.4%	1.48	–4.4%	31.8%	$1.55

US GAAP, net income attributable to Copart. All three years predate ACV. Growth is calculated from unrounded figures. Sources: [C1, C2].

Fiscal years to 31 July. All years predate the ACV acquisition (completed 16 Oct 2026). Net income attributable to Copart. Source: Copart [C1, C2].

FY2025 growth reflected strong volumes and prices. FY2026 stalled, and Q4 EPS fell 14.6% to $0.35 [C2]. We use GAAP diluted EPS throughout and have not identified a material exceptional item in FY2026 that would justify a separate adjusted figure. **The balance sheet shown is pre-deal.** At 31 July 2026 Copart held $1.91bn of cash, equivalents and restricted cash plus $2.58bn of held-to-maturity securities, with no borrowings [C1]. Paying about $1.9bn in cash for ACV leaves roughly **$2.6bn on our arithmetic**, before ACV's own cash, debt and deal costs. This is not a reported post-close figure. The cash spent no longer earns interest, so ACV's profits must replace that income for the EPS-neutral guidance to hold. **Guidance:** none at company level; stated priorities are international insurance, US non-insurance auctions and ACV integration [C3, C4].

5 VALUATION AND RISKS

Case	FY2027 EPS	Key assumptions (EPS = GAAP diluted, year to July 2027)	P/E	Value	vs $28.96
Bear	$1.40	Insurance volumes keep falling; ACV dilutive	16x	$22.40	–22.7%
Base	$1.65	EPS +6.5%; insurance volumes stabilise; ACV neutral	22x	$36.30	+25.3%
Bull	$1.80	Share regained; ACV accretive a year early	26x	$46.80	+61.6%

Our scenarios, without probabilities, unchanged from our earlier screening. Base EPS of $1.65 is our assumption and still lacks a bottom-up volume, fee and cost bridge.

Multiple. 22x sits between today's 18.7x trailing multiple and the 28–37x range of published FY2022–25 year-end P/Es [M6]. Growth was faster in those years, so the history shows what a recovering Copart has been worth, not what it will be worth. **Earnings versus rating.** At today's 18.7x on FY2026 EPS, $1.65 is worth $30.83 (+6.5%). Re-rating to 22x adds a further 18.9 points, so about **three-quarters of the base gap is re-rating**, which the market will only grant once volumes visibly recover. The bear case is credible: FY2026 EPS already fell and Q4 EPS fell 14.6%.

Analyst context. JPMorgan upgraded the stock to Overweight with a $40 target on 3 September, citing evidence of share gains with one insurer in several states; that note came before the results and the ACV announcement [A1]. HSBC downgraded to Hold on 16 September, after both [A2]. Stock Analysis consensus shows a mean target of $39 from 12 analysts (retrieved 29 October) [M3]. These are public summaries and consensus data, not full reports. **Thesis-breaking risk:** continued insurer losses, which would show the network no longer secures contracts. **Next evidence:** Q1 FY2027 results (quarter to 31 October, expected late November): the domestic insurance unit trend, ACV's first consolidated contribution and post-close cash.

6 INVESTMENT PHILOSOPHY FIT

EPS growth ≥10% a year	FAIL FY2026 –2.5% (FY2025 +13.6%)	Net margin >17.5%	PASS 31.8% in FY2026
ROE >15%	PASS (narrow) 16.3% on year-end equity of $9.10bn	Debt/equity <1.5	PASS pre-deal no borrowings; ACV liabilities to verify
Rising interest coverage	NOT MEANINGFUL no borrowings, net interest income	Positive, growing FCF	UNVERIFIED five-year series not built
P/E and P/B below industry	NOT ESTABLISHED no defined peer set	Sector preference	NOT PREFERRED Industrials (preference only)

Attractiveness versus eligibility. Copart fails one hard rule, on one year of data, and passes the margin and leverage tests that VINCI cannot. That, together with the de-rating and a clear near-term test in the Q1 results, is why it ranks first for research time. It does not mean the investment case is proven: the base value relies mostly on a higher multiple. Governance and ESG reviews are still open.

PAYCHEX

PAYX | NASDAQ | INDUSTRIALS: PROFESSIONAL SERVICES, PAYROLL AND HR OUTSOURCING | FISCAL YEAR TO 31 MAY

1 RECOMMENDATION AT A GLANCE

PRICE AND DATE	**$108.21**, regular-session close on 28 October 2026, after the 26 October dividend record date [M8, P5]. That is 22.1x FY2026 GAAP EPS of $4.89, or 18.2x FY2027 adjusted EPS at the guidance midpoint ($5.95).
STATUS	**Priority 3: hold; do not advance now.** Revisit after Q2 FY2027 results if core growth reaches guidance.
STRONGEST REASON FOR	**Paycor** gives Paychex a platform for larger employers and cross-selling into a recurring, high-margin client base. FY2027 guidance implies **7–9% adjusted EPS growth** [P1, P3].
MAIN REASON AGAINST	**Core growth is weak.** Management Solutions grew 4% in Q1 against 5–6% guidance, and GAAP EPS has lagged adjusted EPS since the debt-funded Paycor deal [P2, P3].

2 BUSINESS MODEL AND COMPETITIVE POSITION

Small and mid-sized employers pay **recurring per-client and per-employee fees** for payroll, tax filing, HR software, retirement plan administration and insurance. Through its PEO, Paychex becomes co-employer and bills for HR, benefits and workers' compensation. Revenue grows with client numbers, employees per client, price and product attachment. Paychex also earns **interest on funds held for clients** between collecting and paying payroll and taxes, guided at $200–210m for FY2027 [P3]. Those funds are not corporate cash. The main costs are service and sales staff and technology. Since Paycor, **acquisition-related amortisation and interest** are also material.

The competitive advantage is **switching costs**. Payroll errors carry legal penalties, so employers rarely change provider once embedded, and Paychex's scale in small business spreads compliance and technology costs across many clients. That supports a 27.0% GAAP net margin and an adjusted operating margin guided at about 44% [P1, P3]. The weaknesses are a client base that is sensitive to hiring and business formation, and competition from ADP and software-led rivals that limits pricing.

3 TOP-DOWN INVESTMENT CASE

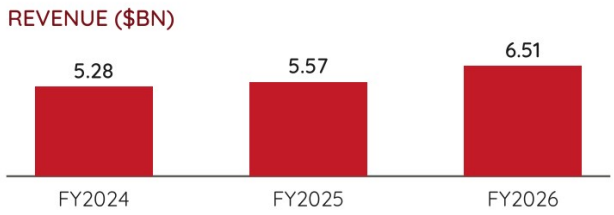

Trend to demand. Rising payroll, tax and benefits complexity pushes small employers to outsource, and demand for bundled benefits drives PEO adoption. **Demand to revenue (evidenced).** In Q1 FY2027, PEO and Insurance Solutions grew 12% and its full-year guidance was raised to 7–8%. Management Solutions, about three-quarters of revenue, grew 4% [P3]. **Revenue to profit and cash (evidenced).** The Q1 adjusted operating margin rose to 42.0% from 40.7%; GAAP diluted EPS grew 14% to $1.21 and adjusted EPS 10% to $1.34 [P3]. **Assumption.** Our case needs cross-selling into Paycor's larger-employer base to lift Management Solutions growth to the guided 5–6%. Q1 was below that rate.

Catalyst (internal). Paycor integration synergies feeding the guided 44% adjusted margin. **Offset (external).** Lower interest rates would reduce client-fund income, although Paychex has just raised that guidance.

4 FINANCIAL PERFORMANCE AND MANAGEMENT OUTLOOK

Fiscal year	Revenue ($bn)	Growth	GAAP net income ($bn)	Growth	Net margin	GAAP diluted EPS
FY2024	5.28	–	1.69	–	32.0%	$4.67
FY2025	5.57	+5.6%	1.66	–1.8%	29.7%	$4.58
FY2026	6.51	+16.9%	1.76	+6.2%	27.0%	$4.89

US GAAP. FY2026 includes a full year of Paycor (acquired April 2025), which contributed about 12 points of revenue growth, so FY2026 is not organically comparable. Sources: [P1, P2, P4].

Fiscal years to 31 May. FY2026 includes a full year of Paycor (acquired April 2025), so it is not organically comparable. GAAP net income. Source: Paychex [P1, P4].

Revenue growth is mostly acquired, and the GAAP net margin has fallen five points in two years. FY2026 net income grew only 6.2% because of **$304.2m of acquisition-related costs** (amortisation of acquired intangibles, integration compensation and professional fees) and because interest expense rose $164.1m to **$269.5m** on Paycor debt [P2]. **Adjusted earnings (company non-GAAP measure, shown separately):** adjusted net income of $1,984.8m equals GAAP $1,760.1m plus $304.2m of acquisition-related costs, less a $73.3m related tax benefit and $6.2m of other discrete tax items. **Interest expense is not added back** to adjusted EPS; it is added back only in EBITDA [P1]. Adjusted EPS rose 10.6% to $5.51, from $4.98. Long-term debt consists of $0.4bn of senior notes due 2029 and $4.2bn of bonds due 2030–2035 [P6].

Management guidance (reaffirmed 23 September 2026): revenue +5–6%, Management Solutions +5–6%, PEO and Insurance +7–8% (raised), client-fund interest $200–210m (raised), adjusted operating margin about 44% and adjusted EPS growth of 7–9% [P3]. The $1.19 quarterly dividend implies $4.76 a year, a 4.4% yield if maintained [P5]. That is **97% of FY2026 GAAP EPS** and 86% of adjusted EPS, so further dividend growth now depends on earnings growth.

5 VALUATION AND RISKS

Case	FY2027 EPS	Key assumptions (EPS = company-adjusted diluted, year to May 2027)	P/E	Value	vs $108.21
Bear	$5.50	Flat adjusted EPS; Management Solutions stays near 4%	17x	$93.50	–13.6%
Base	$5.95	Guidance midpoint: $5.51 × 1.08	20x	$119.00	+10.0%
Bull	$6.15	Above the top of guidance (+11.6%)	22x	$135.30	+25.0%

Our scenarios, without probabilities. We have no GAAP FY2027 forecast; GAAP EPS will be lower by the after-tax acquisition-related costs.

Revision. Our previous base used 22x ($130.90). We cut it to 20x because consensus is Hold, the shares have fallen and core growth is below guidance, so the evidence does not support an ADP-level rating; 22x moves to the bull case. **Multiple.** 20x sits between today's 18.2x on FY2027 adjusted EPS and ADP at about 22.8x consensus forward earnings, although the periods and adjustments are not identical [M9]. **Earnings versus rating.** At today's 19.6x trailing adjusted multiple, guided EPS of $5.95 alone is worth $116.85 (+8.0%), and re-rating to 20x adds 2.0 points. The base therefore depends mainly on **delivering guidance**, not on re-rating. Note that $108.21 ÷ $5.95 = 18.19x, and 18.19x × $5.95 returns $108.21; that is an identity, not a forecast of zero return. The 22.1x GAAP trailing multiple and the 20x adjusted forward multiple are not interchangeable.

Analyst context. Stock Analysis consensus (retrieved 29 October) is Hold, with a mean target of $114.57 from 19 analysts [M2]. We could not confirm current individual broker notes from full reports, so we cite none. **Thesis-breaking risk:** weaker client retention or small-business employment slows Management Solutions further, leaving margin gains to cost cuts and the PEO while Paycor costs keep GAAP EPS below adjusted EPS. **Next evidence:** Q2 FY2027 results (December): Management Solutions growth against 5–6%, retention, and debt reduction.

6 INVESTMENT PHILOSOPHY FIT

EPS growth ≥10% a year	FAIL FY2025 –1.9%, FY2026 +6.8% (GAAP)	Net margin >17.5%	PASS 27.0% in FY2026, down from 32.0%
ROE >15%	UNVERIFIED provider c.47%, not rebuilt	Debt/equity <1.5	UNVERIFIED $4.6bn debt; provider c.1.25x
Rising interest coverage	FAIL operating income ÷ interest 9.3x in FY2026, from above 20x	Positive, growing FCF	UNVERIFIED five-year series not built
P/E and P/B below industry	NOT ESTABLISHED no defined peer set	Sector preference	NOT PREFERRED Industrials (preference only)

Attractiveness versus eligibility. Paychex fails **two hard rules**, EPS growth and rising interest coverage, both caused by the debt-funded Paycor deal, and it could pass them again once integration costs fade. Its investment case at today's price is the least differentiated of the three: a modest base return that depends on guidance Q1 core growth did not yet support. Hold. Governance and ESG reviews are still open.
