THESIS

Dust builds a shared workspace where teams of AI agents work alongside employees inside the same projects, data, and tools. We are betting on the team before the category: an elite repeat-founder pair (Stripe, OpenAI, Alan) that Sequoia has backed three consecutive rounds, running an unusually capital-efficient business (~\$110K ARR per employee). History says companies in this position usually end in a strategic acquisition (MuleSoft, Segment, Looker), not as independent giants — so we price to a 3–6x outcome, and any valuation that needs the 20x+ exception is a pass.

SIZING & PATH

Round is closed. Up to **\$2–3M via secondary**, only at or below the estimated \$350–500M Series B price (~0.5–0.75% at \$400M). In parallel: build the Series C relationship now; re-evaluate on aged-cohort retention and margin disclosure.

SCENARIOS (ANALYST PROBABILITIES)

Bull 15% — memory becomes irreplaceable; 20x+.

Base 55% — strategic acquisition; 3–6x (anchor).

Bear 30% — incumbents bundle past it; <1x late entry.

TOP RISKS

1. MCP commoditization — the open standard is dissolving the 100+ connector library, Dust's most-cited moat, exactly as the market praises it. **2. Hyperscaler bundling** — Microsoft, Salesforce (Agentforce \$1.2B ARR, +205% YoY), and Google ship competing agent builders inside licenses enterprises already pay for; Dust has raised ~\$61M against Sierra's \$950M single round. **3. Opaque economics** — gross margin is set by third-party LLM prices Dust doesn't control; margin, runway, burn, and the Series B price are all undisclosed.

MORE BULLISH IF

Aged cohorts hold NRR >150% · a churned customer measurably loses capability · margins improve as MCP cuts integration costs.

BEARISH IF

Aged-cohort NRR <120% · OpenAI/Microsoft connector-agent bundles win head-to-head · repricing churns the installed base · Series B priced >\$500M.

NEXT STEPS

1. Founder meeting on aged-cohort retention and margin trajectory · 2. CFO call: runway, burn, revenue mix, concentration · 3. Secondary price discovery via brokers · 4. Track non-Microsoft win rate ahead of Series C.
