INDUSTRIALS INVESTMENT PROPOSALS

SCHNEIDER ELECTRIC | HOWMET AEROSPACE | WOLTERS KLUWER

Prepared by **Tanmay Gambhir** for **Adam Asztalos** and **João Pedro Vieira** | Research date: 29 October 2026 | Valuation date: 28 October 2026 closing prices

SCHNEIDER ELECTRIC

SU | EURONEXT PARIS | GICS INDUSTRIALS: ELECTRICAL COMPONENTS AND EQUIPMENT | FISCAL YEAR TO 31 DECEMBER

RECOMMENDATION	**BUY at €246.20** (28 October close) [S10]. Base twelve-month value €274 (+11.5%), plus about 1.8% in dividends.
CENTRAL REASON	Data-centre demand is lifting Energy Management (+18.8% organic in Q3), while the shares trade at 21x deal-adjusted 2027 EPS [S3].
ADVANTAGE	In our view, one of very few suppliers of the full power chain for large data centres, from switchgear and cooling to software.
CATALYST	FY2026 results and 2027 guidance on **18 February 2027**; PTC shareholder vote and regulatory clearances to follow [S4, S19].
COUNTERARGUMENT	A pause in hyperscaler spending would hit the fastest-growing business just as Schneider adds about €16–17bn of debt for PTC [S4].

1 INDUSTRY TRENDS

AI data centres need far more power equipment. The IEA projects data-centre electricity use roughly doubling to about **945 TWh by 2030** [I1]. The spending is still rising: on 28 October Alphabet held 2026 capex guidance at $195–205bn and said 2027 will be significantly higher, and Meta raised the bottom of its 2026 range to $135–145bn [I3, I4]. Investors are nervous all the same: on 22 October Meta's outlook revived worries about how the build-out is financed, and Eaton, Vertiv and GE Vernova fell 6–11% [I2].

2 HOW SCHNEIDER BENEFITS

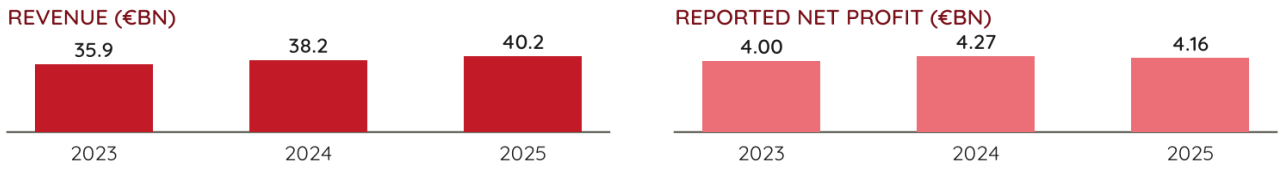

Every megawatt of data-centre capacity needs switchgear, transformers, uninterruptible power supplies, busways and cooling, which is Schneider's **Energy Management** offer. That business produced €9.62bn of the €11.46bn Q3 2026 revenue (84%) and grew 18.8% organically, against 8% for Industrial Automation [S3]. Schneider reported triple-digit growth in data-centre demand and another record backlog [S3, S5]. **Exposure, measured carefully:** Data Center & Networks was 30% of 2025 **orders** [S8], and Morningstar **estimates** data centres at about 29% of **revenue** [S7]. Neither figure isolates AI, because data-centre sales include colocation, enterprise and network sites. **Industrial AI** comes through AVEVA and, once completed, PTC. PTC's fiscal 2025 **revenue** was $2.74bn, about 6% of the combined group; its $2.48bn ARR is a subscription run-rate, not revenue [S12, S18].

3 BUSINESS MODEL AND FINANCIAL PERFORMANCE

Schneider sells electrical equipment, energy-management systems and automation through distributors and directly on projects. Profit comes from scale in standard products, pricing in mission-critical equipment and growing software and services. The main costs are materials, labour, and R&D and selling. The H1 2026 adjusted EBITA margin was **19.3%**; 2025 cash conversion was 111% [S1, S2].

Year	Revenue (€bn)	Growth	Net income (€bn)	Growth	Net margin
2023	35.90	–	4.00	–	11.1%
2024	38.15	+6.3%	4.27	+6.6%	11.2%
2025	40.15	+5.2%	4.16	–2.5%	10.4%

IFRS, attributable to owners of the parent. Reported growth includes currency effects; 2025 organic revenue growth was 8.9%. Sources: [S1, S11].

Fiscal years to 31 December. Net income attributable to owners of the parent (IFRS). Source: Schneider Electric [S1], Stock Analysis for 2023 [S11].

Reported versus adjusted. 2025 reported diluted EPS was €7.33; adjusted EPS (excluding purchase-accounting amortisation and restructuring) was €8.59 [S1]. H1 2026 net income rose 30% and adjusted EPS 21% to €4.79 [S2]. **Guidance (16 October):** 2026 organic revenue +12–14%, organic adjusted EBITA +18–21% [S3].

4 INVESTMENT CASE AND VALUATION

PTC financing is largely in place. For PTC ($205 a share, $22.6bn), Schneider sold **25.0m new shares at €240** on 20 October and issued €6.0bn of bonds at about 4.3%; closing is expected by Q3 2027 [S4, S13, S14]. The latest consensus we found (11 August) predates the deal, so we adjust it [S6, S19]:

Step (company-adjusted EPS, before PTC purchase accounting)	Basis	EPS
2027 consensus before the deal (11 August)	Analyst consensus	€12.23
Spread over 603.7m shares after the 25.0m issue (–4.1%)	Our calculation	€11.72
Pre-closing carry: 4.3% bond coupon vs interest on cash held	Our assumption: about neutral	€11.72
2028 standalone: +10% core growth on €12.23	Our estimate	€13.45
PTC accretion: "low-single-digit" in first full year; we use +2%	Management guidance	€13.72

Carry assumption: the €12bn already raised earns interest until closing, which we assume roughly offsets the coupon on €6bn of bonds. Management's accretion guidance already includes the new shares and debt, so we do not deduct financing costs a second time in 2028. Cost synergies (€250m by year 3) are profit; the ~€800m of revenue synergies are sales, not profit [S4].

Company (28 Oct close)	Price	2026 EPS basis (company-adjusted)	EPS	P/E 2026
Schneider Electric	€246.20	Consensus adjusted for new shares	€10.31	23.9x
Eaton	$392.88	Guidance midpoint (July)	$13.50	29.1x
Hubbell	$437.33	Guidance midpoint (October)	$20.50	21.3x
Vertiv	$242.94	Guidance midpoint (October)	$7.15	34.0x

Schneider trades below the 29.1x median of these peers but above Hubbell. Sources: [S6, S10, E1–E6].

Case	FY2028 EPS	Earnings assumption	16x	20x	23x
Bear	€11.80	Data-centre orders pause; no accretion (–14% vs base)	€188.8 (–23%)	€236.0 (–4%)	€271.4 (+10%)
Base	€13.72	Bridge above	€219.5 (–11%)	€274.4 (+11%)	€315.6 (+28%)
Bull	€14.20	Core +13% and 3% accretion	€227.2 (–8%)	€284.0 (+15%)	€326.6 (+33%)

Twelve-month exit values (October 2027, valued on FY2028 EPS) against €246.20. Base cell: 20x, below the selected-peer median and equal to today's multiple on pre-deal 2027 consensus. 23x is below the roughly 24.8x of 2 October. No probabilities assigned.

Why the return compensates for the risk. The base case earns about 13% (11.5% price plus 1.8% dividends; €4.50 assumed against €4.20 paid in May 2026). We think the market treats the 2027 dilution as permanent and the AI build-out as fragile. PTC's earnings are expected to offset the EPS dilution once consolidated, and Schneider describes data-centre visibility into 2027–28 [S5]. Weaker earnings at 16x would cost 23%.

5 RED FLAGS AND PHILOSOPHY EXCEPTIONS

Red flags. (1) A 2027–28 pause in hyperscaler orders. (2) PTC execution: a 42% premium and pro forma gross debt of roughly 1.2x equity at closing on our estimate. (3) Weakness in China and in process automation [S3]. **Evidence that would invalidate the thesis:** organic Energy Management growth below 8% for two quarters, or a falling backlog.

EPS growth ≥10% a year	FAIL reported 2022 +8.5%, 2024 +6.5%, 2025 –2.7% [S11]	Net margin >17.5%	FAIL 10.4% (2025)
ROE >15%	PASS 15.3% (2025 net income ÷ average 2024–25 equity) [S16]	Debt/equity <1.5	PASS 0.78x reported (June 2026); about 1.2x pro forma for PTC (our estimate) [S17]
Rising interest coverage	UNVERIFIED five-year series not rebuilt	Positive, growing FCF	FAIL €4.6bn (2023) to about €4.2bn (2024) [S1, S15]
P/E below industry	UNVERIFIED 23.9x vs 29.1x selected-peer median; no industry average	P/B below industry	UNVERIFIED about 4.8x after the share issue; no benchmark

Test definitions are listed with the sources [J1]. Industrials is not a preferred sector; qualitative criteria are not scored.

HOWMET AEROSPACE

HWM | NYSE | GICS INDUSTRIALS: AEROSPACE AND DEFENCE | FISCAL YEAR TO 31 DECEMBER

RECOMMENDATION	**BUY at $195.19** (28 October close) [H7]. Base twelve-month value $220 (+12.5%); dividends are small and excluded.
CENTRAL REASON	Guided 2026 adjusted EPS of $5.50 (+46%), yet the shares are about 37% below their $310 high [H14, H17].
ADVANTAGE	One of very few suppliers qualified to make single-crystal turbine blades for jet engines [H1].
CATALYST	FY2026 results and formal 2027 guidance, expected February 2027. The 29 October results, which raised guidance, came after our price date [H14].
COUNTERARGUMENT	At 30x our 2027 EPS the shares still need strong delivery, and a slip in engine demand would hit the multiple as well as earnings.

1 INDUSTRY TRENDS

Aircraft demand exceeds supply, and engines are the bottleneck. Boeing's commercial backlog reached a record $612bn (over 6,300 aircraft) at 30 September 2026, and Airbus's backlog of 9,362 aircraft covers about 10.8 years at its delivery target [A1, A2]. Aftermarket demand is strong as well: GE Aerospace's Q3 orders rose 49% and its services backlog exceeds $170bn [A3]. The shares have not tracked this. They fell for five straight sessions to a one-year low of **$185.91** on 23 October, amid weakness across aerospace stocks and analyst target cuts rather than company news [H17].

2 HOW HOWMET BENEFITS

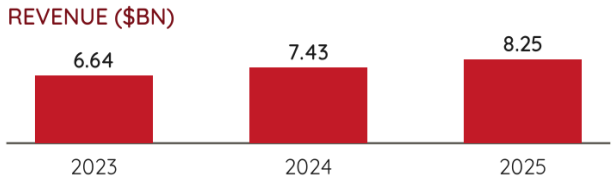

New engines and engine overhauls both consume Howmet's turbine blades, structural castings and fasteners, so new-build and spare-parts demand flow into the same order book. **Engine Products** revenue rose 33% to $1.45bn in Q3 2026, with an adjusted EBITDA margin of **39.1%** (+580bp), driven by commercial aerospace and industrial gas turbines [H1]. Turbine airfoils operate in gas hotter than the alloy's melting point, and each part takes years to qualify on an engine programme. That makes switching suppliers slow and supports Howmet's pricing. Howmet has no meaningful AI exposure.

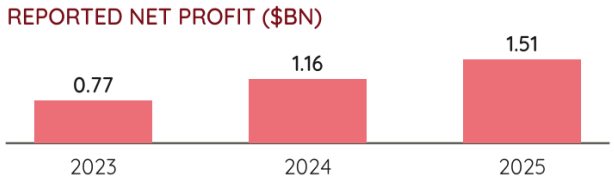

3 BUSINESS MODEL AND FINANCIAL PERFORMANCE

Howmet sells precision parts under long-term agreements with engine makers, airframers and gas-turbine customers. Its segments are Engine Products, Fastening Systems ($630m of Q3 revenue; +10% excluding the CAM and Brunner acquisitions), Engineered Structures and Forged Wheels [H1]. The main costs are nickel and titanium alloys, skilled labour and energy-intensive casting capacity; 2025 capital expenditure was a record $453m [H2].

Year	Revenue ($bn)	Growth	Net income ($bn)	Growth	Net margin
2023	6.6	+17%	0.77	+63%	11.5%
2024	7.4	+12%	1.16	+51%	15.5%
2025	8.3	+11%	1.51	+31%	18.3%

US GAAP, continuing operations. Revenue growth as reported; margins use revenue of $6.64bn, $7.43bn and $8.25bn. Sources: [H2, H4, H5].

Fiscal years to 31 December. US GAAP net income from continuing operations. Revenue rounded as reported. Source: Howmet [H2, H4, H5].

Net margin rose seven points in two years as pricing and spares mix outpaced cost inflation, and interest expense fell from $259m (2021) to $151m (2025) [H3, H13]. 2025 GAAP EPS was $3.71 and adjusted EPS $3.77 [H2]. **Management guidance (29 October):** 2026 revenue of $10.29–10.31bn, adjusted EBITDA of $3.325–3.335bn, adjusted EPS of $5.49–5.51 and free cash flow of about $2.0bn, including CAM (acquired April 2026 for about $1.8bn). Management also envisages about **$11.5bn of revenue in 2027** [H9, H14, H15].

4 INVESTMENT CASE AND VALUATION

Price basis. We use $195.19, the 28 October close reported by the FT, Investing.com and Stock Analysis [H7]; one aggregator showed $194.56. The valuation uses the closing price before the results announcement; the subsequent market reaction is excluded. Investors may already have anticipated stronger results.

Step (adjusted EPS)	Basis	EPS
2026 guidance midpoint	Management guidance	$5.50
2027 revenue $11.5bn (+12%)	Management outlook	–
2027 EBITDA margin 33.1% (+80bp; 40% incremental vs 43% in Q3 2026)	Our estimate	$3.81bn
Net share count −2.5% (about $2bn buybacks; $1.1bn executed in 2026 to Q3)	Our estimate	$6.45 (2027)
2028: revenue +9%, margin +50bp, shares −2.5%	Our estimate	$7.32 (2028)

We assume D&A, interest and tax grow in line with EBITDA. The $5.4bn authorisation is capacity, not executed buybacks; our ~$2bn a year matches 2026 free cash flow guidance [H14, H16].

Company (price date)	Price	Current-year EPS basis (adjusted)	EPS	P/E
Howmet (28 Oct)	$195.19	2026 guidance midpoint (29 Oct)	$5.50	35.5x
GE Aerospace (28 Oct)	$301.13	2026 guidance midpoint (20 Oct)	$8.05	37.4x
TransDigm (26 Oct)	$1,124.47	FY Sep-2026 implied guidance midpoint	$41.04	27.4x

TransDigm's midpoint is our arithmetic from its published raise; indicative only. Sources: [H7, P1–P4].

Case	FY2028 EPS	Earnings assumption	25x	30x	35x
Bear	$6.37	Revenue +6% a year, flat margin (−13% vs base)	$159.2 (−18%)	$191.1 (−2%)	$223.0 (+14%)
Base	$7.32	Bridge above	$183.0 (−6%)	$219.6 (+12.5%)	$256.2 (+31%)
Bull	$7.77	Revenue +14% then +11%; faster margin gains	$194.2 (−1%)	$233.1 (+19%)	$271.9 (+39%)

Twelve-month exit values (October 2027, on FY2028 EPS) against $195.19. Base cell 30x: today's multiple on our 2027 EPS, inside the 27–37x peer range and well below where the shares traded at their high. No probabilities assigned.

Why the return compensates for the risk. The base case earns about 12.5%, all of it from earnings growth. We think the market is extrapolating the October sector sell-off rather than Howmet's own numbers: it raised guidance again and bought back $1.1bn of shares this year at higher prices [H16]. A lower multiple alone costs 6%, and weaker earnings at 25x would cost 18%.

5 RED FLAGS AND PHILOSOPHY EXCEPTIONS

Red flags. (1) Valuation still assumes strong delivery. (2) A few engine makers dominate sales, and Boeing or Airbus production problems would delay orders. (3) Integration of CAM and Brunner. **Evidence that would invalidate the thesis:** organic growth below 8% with a falling Engine Products margin.

EPS growth ≥10% a year	**FAIL** total diluted EPS $0.59 in both 2020 and 2021; continuing operations $0.48 to $0.59 (+23%), then +88%, +65%, +54%, +32% [H6, H10]	**Net margin >17.5%**	**PASS** 18.3% (2025)
ROE >15%	**PASS** 30.4% (2025 net income ÷ average 2024–25 equity)	**Debt/equity <1.5**	**PASS** 0.77x (September 2026 borrowings $4.44bn ÷ equity $5.76bn) [H15]
Rising interest coverage	**PASS** 2.9x, 4.0x, 5.5x, 9.0x, 13.6x (2021–25) [H3, H13]	**Positive, growing FCF**	**PASS** $250m, $540m, $682m, $977m, $1,431m (2021–25) [H4, H5, H11, H12]
P/E below industry	**UNVERIFIED** 35.5x vs 32.4x selected-peer median; no industry average	**P/B below industry**	**UNVERIFIED** about 13x; no benchmark

EPS: 2020 total EPS includes $0.11 from the businesses spun off with Arconic Corp in April 2020. Continuing operations is the more useful measure of today's company, but the strict reported-EPS test fails. Coverage: 2024–25 operating income is derived from reported margins. FCF: 2021 uses the pre-2022 receivables presentation; on the company's adjusted basis 2021 was $517m, still below 2022.

WOLTERS KLUWER

WKL | EURONEXT AMSTERDAM | GICS INDUSTRIALS: PROFESSIONAL SERVICES | FISCAL YEAR TO 31 DECEMBER

RECOMMENDATION	**BUY at €83.80** (28 October close) [W6]. Base twelve-month value €92 (+9.4%), plus about 3.2% in dividends.
CENTRAL REASON	The market prices AI disruption, but recurring revenue grew 7% organically in H1 2026 and renewal rates stayed above 90% [W2, W15].
ADVANTAGE	Expert, liability-backed content built into clinicians', accountants' and lawyers' daily workflows [W2].
CATALYST	Nine-month trading update on **4 November 2026**; FY2026 results in February 2027 [W17].
COUNTERARGUMENT	AI tools may let customers bypass paid content; AI adoption so far has not been shown to add revenue.

1 INDUSTRY TRENDS

Professional-information demand has held up through the AI scare. On 3 February 2026 the launch of AI legal plug-ins knocked about 13% off Wolters Kluwer and 14% off RELX in a day, on fears that routine legal work would be automated [W5]. Operating data since then does not show that disruption. RELX reported **7% underlying growth** for the first nine months of 2026, including 10% in Legal [W8], and Wolters Kluwer's recurring revenue grew 7% organically in H1 [W2]. The shares were around €159 in February 2025; in June 2026 they traded near €60, about 11x consensus earnings [W7, W21].

2 HOW WOLTERS KLUWER BENEFITS

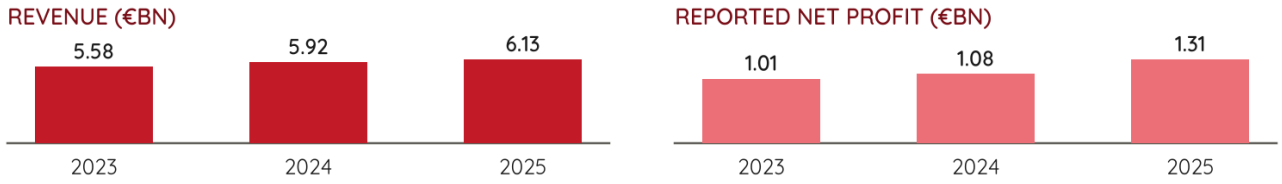

Regulation, clinical guidelines and tax codes keep changing, and professionals pay for verified content they can rely on. **Retention:** renewal rates for the largest subscription products stayed above 90% in 2025 [W15]. **Adoption is not revenue:** UpToDate Expert AI reached over 90% of US enterprise customers (about 2,500 hospitals) by mid-2026 [W12]. Management says the AI is **bundled into subscriptions**, so it is paid for through renewals and price increases, with add-ons priced at renewal over time [W16]. The company has not disclosed incremental AI revenue. Adoption shows customers taking AI from their incumbent supplier. It does not yet prove the moat is getting wider. These are professional AI products, not industrial AI.

3 BUSINESS MODEL AND FINANCIAL PERFORMANCE

Wolters Kluwer is classified as Industrials, Professional Services [W13]. Hospitals, accounting firms, banks and corporate legal departments pay subscriptions for UpToDate, CCH Axcess tax software, compliance services and legal research. Recurring revenue is **85%** of the total, and the H1 2026 adjusted operating margin was **29.4%** [W2]. The main costs are editorial experts, product development (12–13% of revenue in 2026, to fund AI) and sales [W2].

Year	Revenue (€bn)	Growth	Net profit (€bn)	Growth	Net margin
2023	5.58	–	1.01	–	18.0%
2024	5.92	+5.9%	1.08	+7.1%	18.2%
2025	6.13	+3.5%	1.31	+21.2%	21.4%

IFRS profit attributable to shareholders; 2025 includes a €232m tax-exempt gain on the sale of the FRR unit. Excluding it, 2025 profit was about €1.08bn (17.6% margin). 2025 organic growth was 6%. Sources: [W1, W3].

Fiscal years to 31 December. IFRS profit attributable to shareholders; 2025 includes a divestment gain. Source: Wolters Kluwer [W3].

Underlying profitability. Without the FRR gain, 2025 IFRS profit was flat on 2024 and IFRS EPS rose only about 3% (€4.64 vs €4.52). The company's **adjusted** measures exclude such gains and acquired-intangible amortisation: adjusted net profit was €1,225m (20.0% of revenue) and adjusted EPS €5.29, up 6% reported and 9% in constant currency [W1]. **Guidance (reaffirmed 5 August):** an adjusted operating margin of about 28%, adjusted free cash flow of €1.30–1.35bn and high-single-digit growth in constant-currency adjusted EPS [W2].

4 INVESTMENT CASE AND VALUATION

Buybacks distort the balance sheet. Equity fell from €1,545m to €798m in 2025 as buybacks and dividends exceeded comprehensive income [W4]. At 30 June 2026 equity was €940m and net debt €4,024m, unchanged from December at 2.0x EBITDA [W22]. That inflates ROE (about 112% for 2025), debt/equity (5.9x in June) and P/B (about 21x). Net debt to EBITDA and interest cover of about 20x are the more useful leverage measures, and both are moderate.

Company (28 Oct close)	Price	2026 adjusted EPS basis	EPS	P/E 2026
Wolters Kluwer	€83.80	Our estimate; S&P Global consensus €5.62 (June)	€5.60	15.0x
RELX	2,891p	S&P Global consensus via Stock Analysis (June)	141p	20.5x
Verisk	$189.80	Guidance midpoint (reaffirmed July)	$7.60	25.0x

Same price date and adjusted EPS basis; Wolters Kluwer and RELX consensus come from the same provider and date. Wolters Kluwer's price is single-source, close to €86.6–87.2 quoted on 26–27 October. Sources: [W6, W7, W9, W18–W20].

Earnings bridge (our estimates). 2026: high-single-digit constant-currency growth on €5.29, less a dollar headwind, gives €5.60, in line with consensus. 2027 (€6.05, +8%): 5.5% organic growth, about 40bp of margin and a share count about 2.5% lower (the €500m 2026 buyback is about 2.6% of the market value), partly offset by net financing costs, which the company now guides at about €105m for 2026 [W2]. 2028 repeats the 8%, giving **€6.55**.

Case	FY2028 EPS	Earnings assumption	11x	14x	19x
Bear	€5.60	AI erodes pricing; EPS flat (–15% vs base)	€61.6 (–26%)	€78.4 (–6%)	€106.4 (+27%)
Base	€6.55	Guidance delivered, then +8%	€72.0 (–14%)	€91.7 (+9%)	€124.5 (+49%)
Bull	€6.75	AI add-ons lift pricing	€74.2 (–11%)	€94.5 (+13%)	€128.2 (+53%)

Twelve-month exit values (October 2027, on FY2028 EPS) against €83.80. Base cell 14x is close to today's 13.9x on our 2027 EPS; 11x is the June trough. No probabilities assigned.

Why the return compensates for the risk. The base case earns about 13% (9.4% price plus 3.2% dividends, assuming €2.65 a year) without needing a re-rating. RELX at 20.5x shows what the market pays when growth holds up. A return to the June trough multiple on flat earnings would cost 26%, so the next two trading updates matter.

5 RED FLAGS AND PHILOSOPHY EXCEPTIONS

Red flags. (1) AI disruption, which early adoption data cannot rule out. (2) A buyback-thinned balance sheet. (3) Non-recurring revenue fell 3% in H1, and Corporate Performance & ESG slowed [W2]. **Evidence that would invalidate the thesis:** recurring organic growth below 5%, or renewal rates below 90% in Health or Tax & Accounting.

EPS growth ≥10% a year	FAIL IFRS 2023 +2.0%; 2025 +24.8% only with the FRR gain [W3]	Net margin >17.5%	PASS 21.4% reported (17.6% excluding the gain)
ROE >15%	PASS about 112%, distorted by buyback-reduced equity	Debt/equity <1.5	FAIL 5.9x (June 2026 gross debt €5.55bn ÷ equity €0.94bn); about 5.7x excluding leases [W22]
Rising interest coverage	FAIL 25x (2022), 55x (2023), 26x (2024), 20x (2025), on adjusted figures [W1, W3]	Positive, growing FCF	UNVERIFIED five-year series not rebuilt; 2026 guide €1.30–1.35bn vs €1.35bn in 2025
P/E below industry	UNVERIFIED 15.0x vs RELX 20.5x and Verisk 25.0x; no industry average	P/B below industry	UNVERIFIED about 21x (June 2026 equity); not meaningful after buybacks

Same definitions as for Schneider Electric; balance-sheet ratios use the 30 June 2026 interim report. June gross debt includes a €500m bond issued on 22 June to refinance one repaid on 2 July.

Philosophy test definitions (all three companies) [J1]: EPS growth uses reported diluted EPS, with growth of at least 10% in each year 2021–25. Net margin is reported net income ÷ revenue. ROE is net income ÷ the average of opening and closing equity. Debt/equity is current plus non-current borrowings (excluding leases) ÷ total equity at the latest balance sheet; acquisition pro forma figures are shown separately. Interest coverage is operating profit ÷ net interest, each year 2021–25. FCF is operating cash flow – capital expenditure. PASS needs a complete test; incomplete tests are UNVERIFIED.

Growth rates, margins, ratios, multiples, earnings bridges and scenario values are our calculations from the sources above. Prices are 28 October 2026 closes unless another date is shown. Consensus figures are aggregator or company-compiled snapshots and may differ by provider.
